Sprint Review Meeting 1

Meeting agenda

- Discuss the Sprint

- Achievements and non-Achievements of Sprint

- Ways on improving on next scrum

- Scheduling on sprint planning meeting 2

Notes:

0.1 The sprint:

The first Sprint was a great learning experience for all members involved in the team because it was an experience that none of us have had before. There were many challenges faced by each member, but overall we handled the task reasonably well. Unfortunately we weren't able to accomplish all the tasks set before us due to, amongst others, some unforeseen circumstances. :

0.2 Achievements and non-Achievements of the Sprint

- Lethabo: Managed to complete the interface of the use cases that we wanted to discuss in the sprint, but had troubles in terms of connecting it to the database as well as connecting it on to an emulator or android device. Client was understandably unhappy but understood that these sort of things happen, especially on the first attempt ;

- Fortune: Had many other personal commitments, but managed to complete the task given to him reasonably well. He gained a lot of experience and shared the experience with his fellow team mates. He was assigned to take care of the Test driven design document and had impressive ideas on the system could be tested. There is always room for improvement;

- Kgopotsho: Was assigned the Architecture Document and completed it very well. Despite that not all the functionalities mentioned in the document were fulfilled, it gave us a good understanding as to how the system is required to perform and gave us a solid foundation for future sprints;

- Chris: As scrum master, he's administrative responsibilities were commended by both client and product owner, true he didn't have much experience in the role, he managed to keep the team focused. All his documentation was accurate and consistent. There is also room for improvement;

- Mthulisi: Was given the task to complete the RAD and did exceptionally well given the fact that we didn't have a well enough understanding of how the task was to be executed. He delivered his part, but there's always room for improvement;

0.3   Ways to improve going forward

From now our biggest problem as a team was the misconception we had of the Agile methodology. Since this methodology is something new to us we werent able to apply it as effectively as we would've hoped and thus we will be able to improve if we in turn dont attempt to finish the product as a whole but then start at a basic and then continuously improve

0.4   Scheduling of next meeting:

Meeting adjourned, Sprint planning meeting 2 to be scheduled on 12 August 2016 at 12h00.
